

Fastweb's Cloud services and Privacy are among the best for Enterprise customers

Among the first telecommunications companies in Italy, the company obtains two important awards confirming the soundness of its data management processes for Enterprise customers and the security of its Cloud solutions

Milano, 12 December 2022 - Fastweb remains one of the most reliable and secure market players in the management of companies' and the public administration's data and in its offer of Cloud solutions, as demonstrated by the two important certifications it has just earned, which will further drive the company's role in the digital transformation of Italy and in the creation of an increasingly connected future.

Fastweb is one of the first telecommunication companies in Italy to certify all its ICT services in accordance with ISO/IEC 27701, having adopted an efficient, documented and well-structured system for the secure management of its customers' data and the protection of their privacy in line with international best practices under the ISO 27701 standard. This certification underscores Fastweb's commitment to guaranteeing increasingly secure data management and comes in the wake of the certification awarded to Fastweb in March 2022 for its Cloud services, attesting to its greater transparency and reliability in securing Enterprise customers' data, in full compliance with national and international data protection legislation.

Fastweb is also the first Italian Cloud Service Provider (CSP) to receive CSA STAR Level 2 certification, which ACN, the national cybersecurity agency, has made a requirement for the provision of Cloud services to the public administration in Italy as part of the national Cloud strategy. This internationally recognized certification promoted by the Cloud Security Alliance (CSA) shows that the company has effectively implemented adequate processes and technological elements to correctly identify cybersecurity risks and to take the appropriate countermeasures, ensuring maximum data protection and service performance at all times. In the certification process, Fastweb was rated Gold, the highest level of conformity that can be achieved for CSA STAR.

"These two highly strategic certifications once again show how Fastweb is a secure and reliable partner for companies and public administration bodies seeking to boost their digital transformation processes," announced Augusto Di Genova, Chief Enterprise Officer of Fastweb. "With these new certifications, we have reached an even higher standard of excellence for all our Cloud services, in addition to strengthening the security of our customers' data management."
