Biesse Group chooses Fastweb as partner of excellence to manage its new technological platform

Milan, 15 September 2017 – Fastweb has been selected by Biesse Group, the Italian multinational and global leader in technology for wood, glass, stone, plastic and metal manufacture, as its partner for the implementation and management of the Oracle *Engineered Systems* technological platform, supporting the activities and data management in the various business processes.

Fastweb has managed all of the project phases, from solution design to assistance following implementation of the new platform, completing the project with a very short turnaround time, meeting the planned deadlines and budgets and above all, ensuring the business continuity of Biesse Group and the Oracle platform at all times, neither of which registered the minimum interruption to their business throughout the process.

The project completed between partners Fastweb, Oracle and Biesse Group was published on Oracle's worldwide website, within the *Oracle Customer Reference Programs* dedicated to the success stories for the most advanced IT solutions.

Biesse Group's data and Oracle's Engineered Systems platform are also hosted in Fastweb's certified Tier IV Data Centre in Milan, which guarantees the maximum security for customer company data and is integrated with the Security Operation Centre, the cyberattack prevention centre. Both centres are directly interconnected on backbone IP in Fastweb fibre optics, in order to guarantee multiple data routing.
